

Edvin Bishor

Location: Thrissur, Kerala, India

LinkedIn: www.linkedin.com/in/edvin-bishor-233a0814a

GitHub: github.com/ebishor

Email: ebishor@gmail.com | Mobile: +91 9746891115

SKILLS

Languages : Python, Java, SQL, REST APIs, JavaScript, C#, C++
AI Skills : Agentic AI, LLM Engineering, RAG, MCP, CrewAI, Spring AI, SAP Joule/GenAI Hub
Databases : PostgreSQL, MySQL, SAP HANA, MongoDB
Tools / Frameworks : Spring Boot, LangChain, .NET, Git, Visual Studio Code, IntelliJ IDEA, Jupyter Notebook, Postman, Bruno, Swagger

EDUCATION

National Institute of Technology Calicut <i>MTech CSE in Artificial Intelligence and Data Analytics</i>	August 2024 – Present CGPA: 7.28
BMS College of Engineering, Bengaluru <i>B.E in Mechanical Engineering</i>	June 2017– June 2021 CGPA: 8.15

EXPERIENCE

Internship at SAP	Aug 2025 – Jun 2026
- Contributed to AI/ML-driven solutions in the BTP Integration Cloud Environment department as part of the Java Engineering team. - Built an ISDC AI assistant using SAP Joule by developing scenario–function based capabilities to retrieve database, system, and tenant details through backend integrations. - Implemented a Retrieval-Augmented Generation (RAG) pipeline using SAP HANA Vector Engine, with <code>text-embedding-3-large</code> for embeddings, <code>gpt-4o</code> for response generation, cosine similarity for retrieval, and LangChain for document chunking and processing. - Developed a prototype agentic AI framework using CrewAI to explore multi-agent orchestration patterns for enterprise AI workflows.	
System Engineer, Infosys	Dec 2021 – Apr 2024
- Worked as a developer in the Automation (RPA) team at EdgeVerve, contributing to enterprise automation solutions. - Developed automation processes and backend components using C#/.NET in Visual Studio, including implementation, testing, debugging, and issue resolution. - Contributed to UI development and bug fixes using JavaScript and the AssistEdge platform. - Received the Applause Award for contributions to the RGA use case.	

PROJECTS

Automated Flowchart Generator from Instruction Manual

- Built an automated flowchart generator using OpenCV, pytesseract, spaCy, POS tagging, and LLMs to convert input text/images into structured process flow diagrams. Implemented and compared two approaches—an NLP-based pipeline and a Llama 3.1-based LLM pipeline—using BLEU score for evaluation (sample: NLP 0.68, Llama 3.1 0.84), showing better output quality with the LLM approach.

Worker Turnout Predictor

- Developed a worker turnout prediction model using Random Forest and XGBoost to forecast attendance outcomes from historical workforce data. Evaluated the models using precision, recall, F1-score, and accuracy (sample: Random Forest–Precision 0.82, Recall 0.79, F1 0.80, Accuracy 0.83; XGBoost–Precision 0.87, Recall 0.85, F1 0.86, Accuracy 0.88), with XGBoost performing better overall.
